

Color options

- Bring a touch of the theater to your project
- A long, thin gel – just ¼" high – slides into the extruded slot on the inside of each fixture
- Create an instant design element without affecting the performance of the fixture or the color of light within the space
- Available in 5 standard colors or create any desired effect by incorporating any Roscolux gel

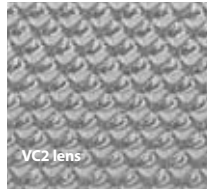

Design elements

- Measures a mere 1" high
- Unique side glow light slot provides balance between the luminaire brightness and the ceiling brightness
- Regressed VCOptic VC2 lens creates another "line of light" for greater visual interest and appeal
- End channel detail separates the upper mass of the fixture from the lower extruded element
- Color gel options make the side glow come alive

VCOptic™ VC2 Lens

- VC2 lens utilizes microprism technology in an acrylic lens to control the luminance, create uniform brightness, and obscure any lamp images
- The lens is coupled with a semi-specular reflective material to produce a textured look that adds visual interest to the fixture and the space

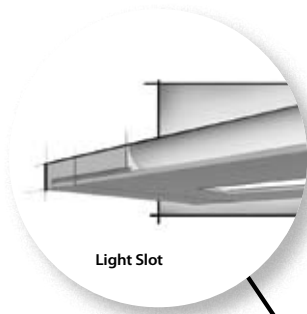

Features	Benefits
Light slot	Adds visual interest and softens the contrast of the fixture against the bright ceiling
Color gel option	Bold design statement with gels make the side glow come alive
Choice of lamping	Two-lamp T5 or T5HO for the latest high efficiency lamp and ballast technologies
VCOptic VC2 lens	Introduces visual texture to the fixture and the space with no lamp images
Extruded aluminum housing	Emphasizes the thin, light statement of the Vivid fixture
CS Control Solutions	Fully integrated sensor and control technologies for energy savings
C2C Silver Certified	Ensures that the product and the manufacturing meet sustainability criteria

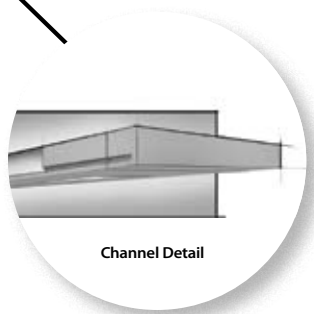

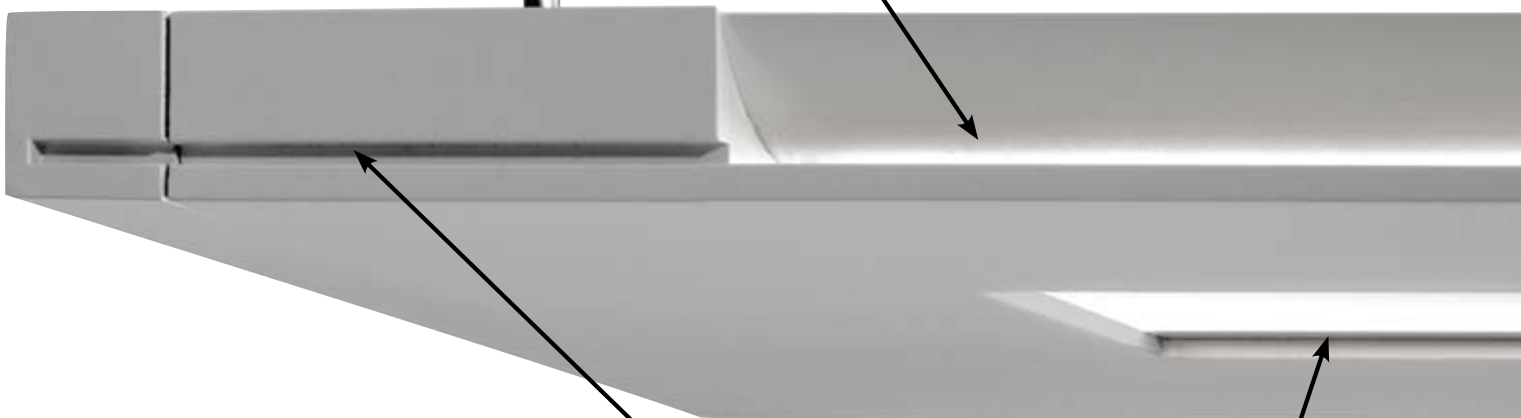

VIVID™

The smallest member of the Latitude family of extruded fixtures, Vivid pushes “small” to the limits with its 1" height. The long, thin look is enhanced by the side glow light slot, while the VCOptic lens (VC2), with its regressed edges, adds further linearity and visual appeal.
